

CLYVERO ERP

Architecture and Deployment - Quick Reference

MULTI-TENANT | MULTI-SERVICE | MODULAR MONOLITH | CONTAINERIZED

The one-sentence answer

Clyvero ERP is a containerized, multi-service, multi-tenant SaaS application with a three-tier client-server architecture and a modular-monolith Laravel backend.

Core services

- Next.js + React frontend
- Laravel REST API
- PostgreSQL database
- Redis cache and queue
- Worker, scheduler and Caddy

Portals and isolation

- Owner: global platform control
- Principal: one school tenant
- Secretary and teacher permissions
- Parent sees linked children only
- school_id scopes tenant records

Recommended first server

- Hetzner CX23
- 2 vCPU, 4 GB RAM, 40 GB SSD
- EUR 5.49/month before additions
- Host frontend and backend together
- Measure before upgrading

Domains

- app.clyvero.com - school users
- owner.clyvero.com - platform owner
- api.clyvero.com - Laravel API
- One deployment and one database
- HTTPS and owner email OTP

Scaling rules

- Investigate at 70% disk, 75% sustained RAM or 70% sustained CPU.
- Photos, documents, logs and backups usually grow faster than database rows.
- When resizing upward, keep the root disk size if a later downgrade may be needed.
- Use nightly database + upload backups and complete a restoration rehearsal.
